

**CERIF: A format
to enable
interoperability of research
information**

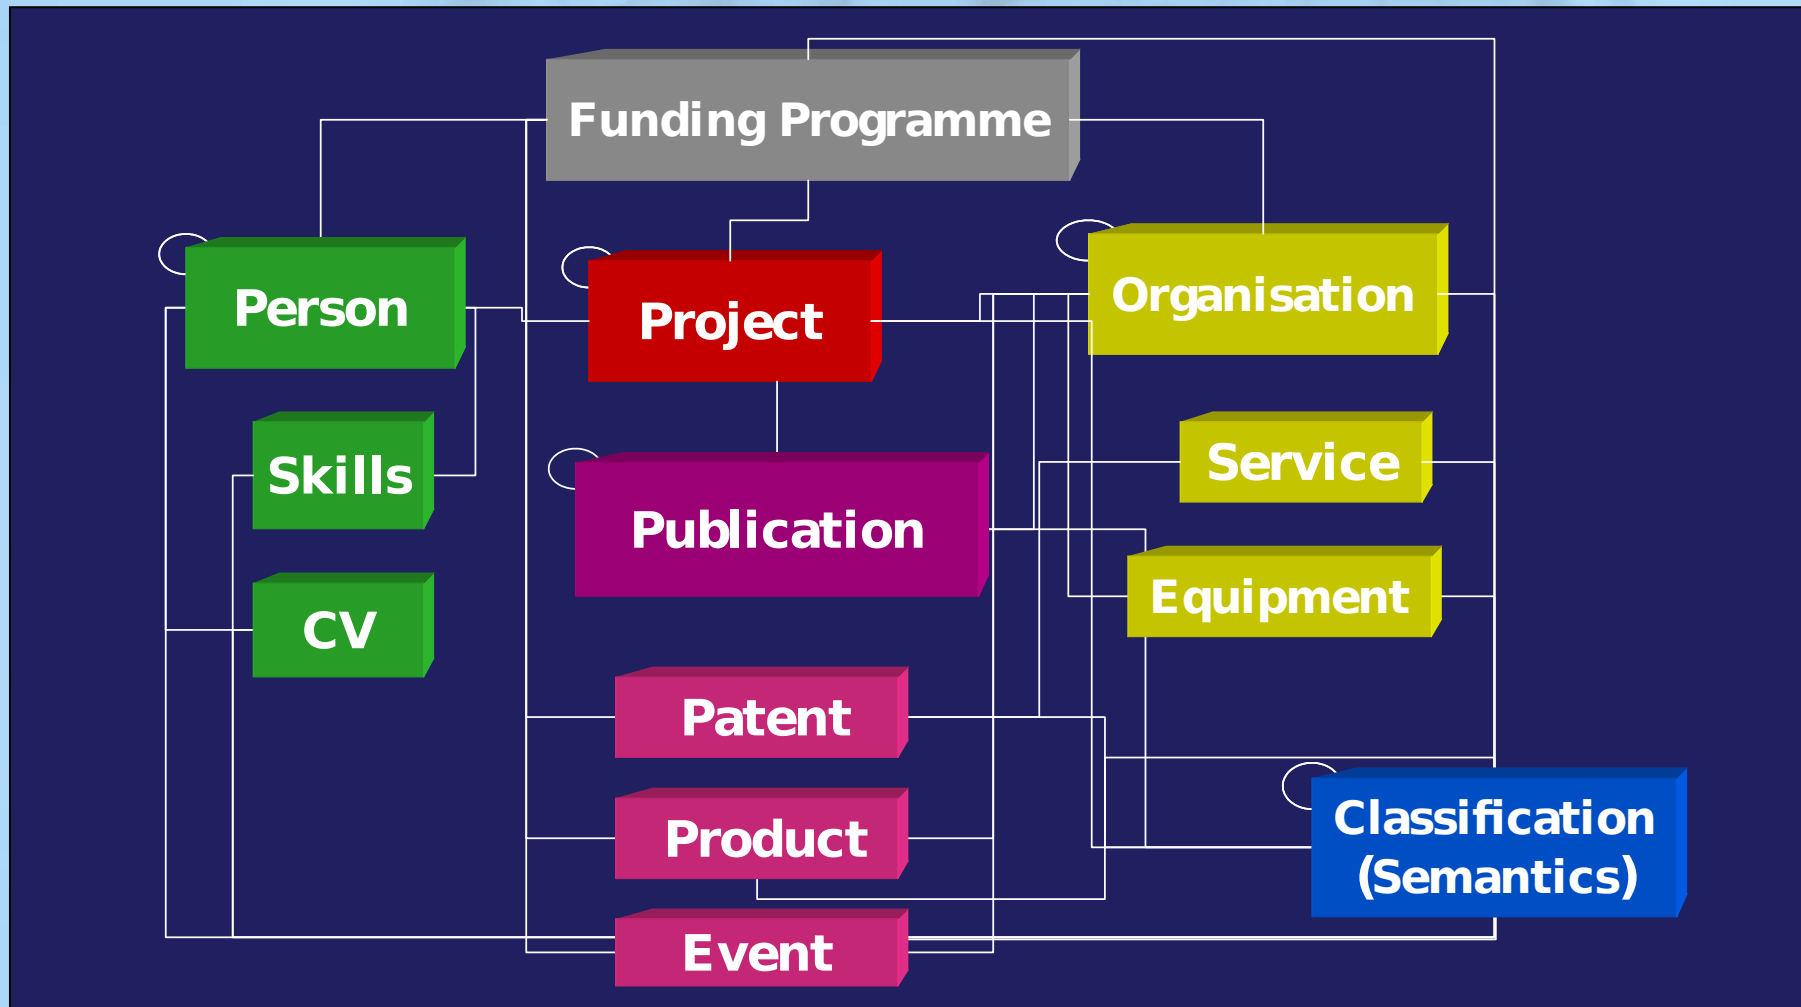

- **in the responsibility of euroCRIS**
- **handed over to euroCRIS as a recommendation to New Member States by the European Commission in 2000**
- **to build Research Information Systems**
- **to enable interoperation between Research Information Systems**

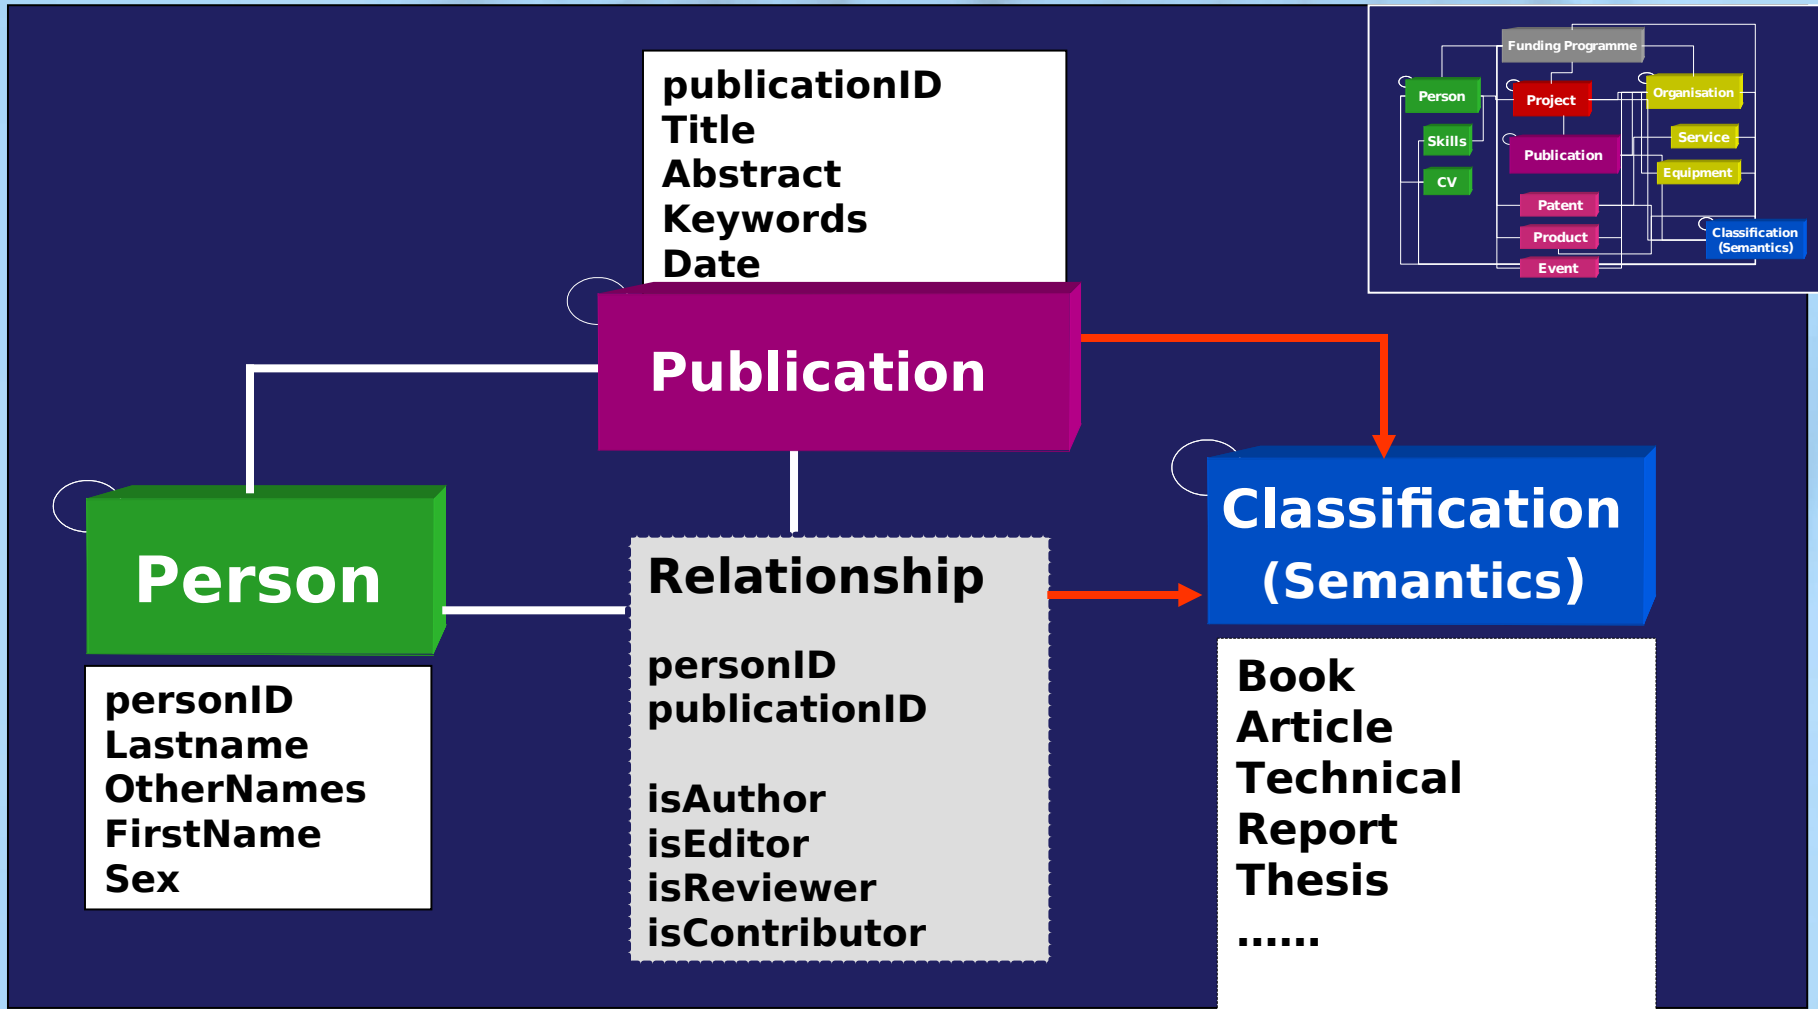

What is CERIF ?

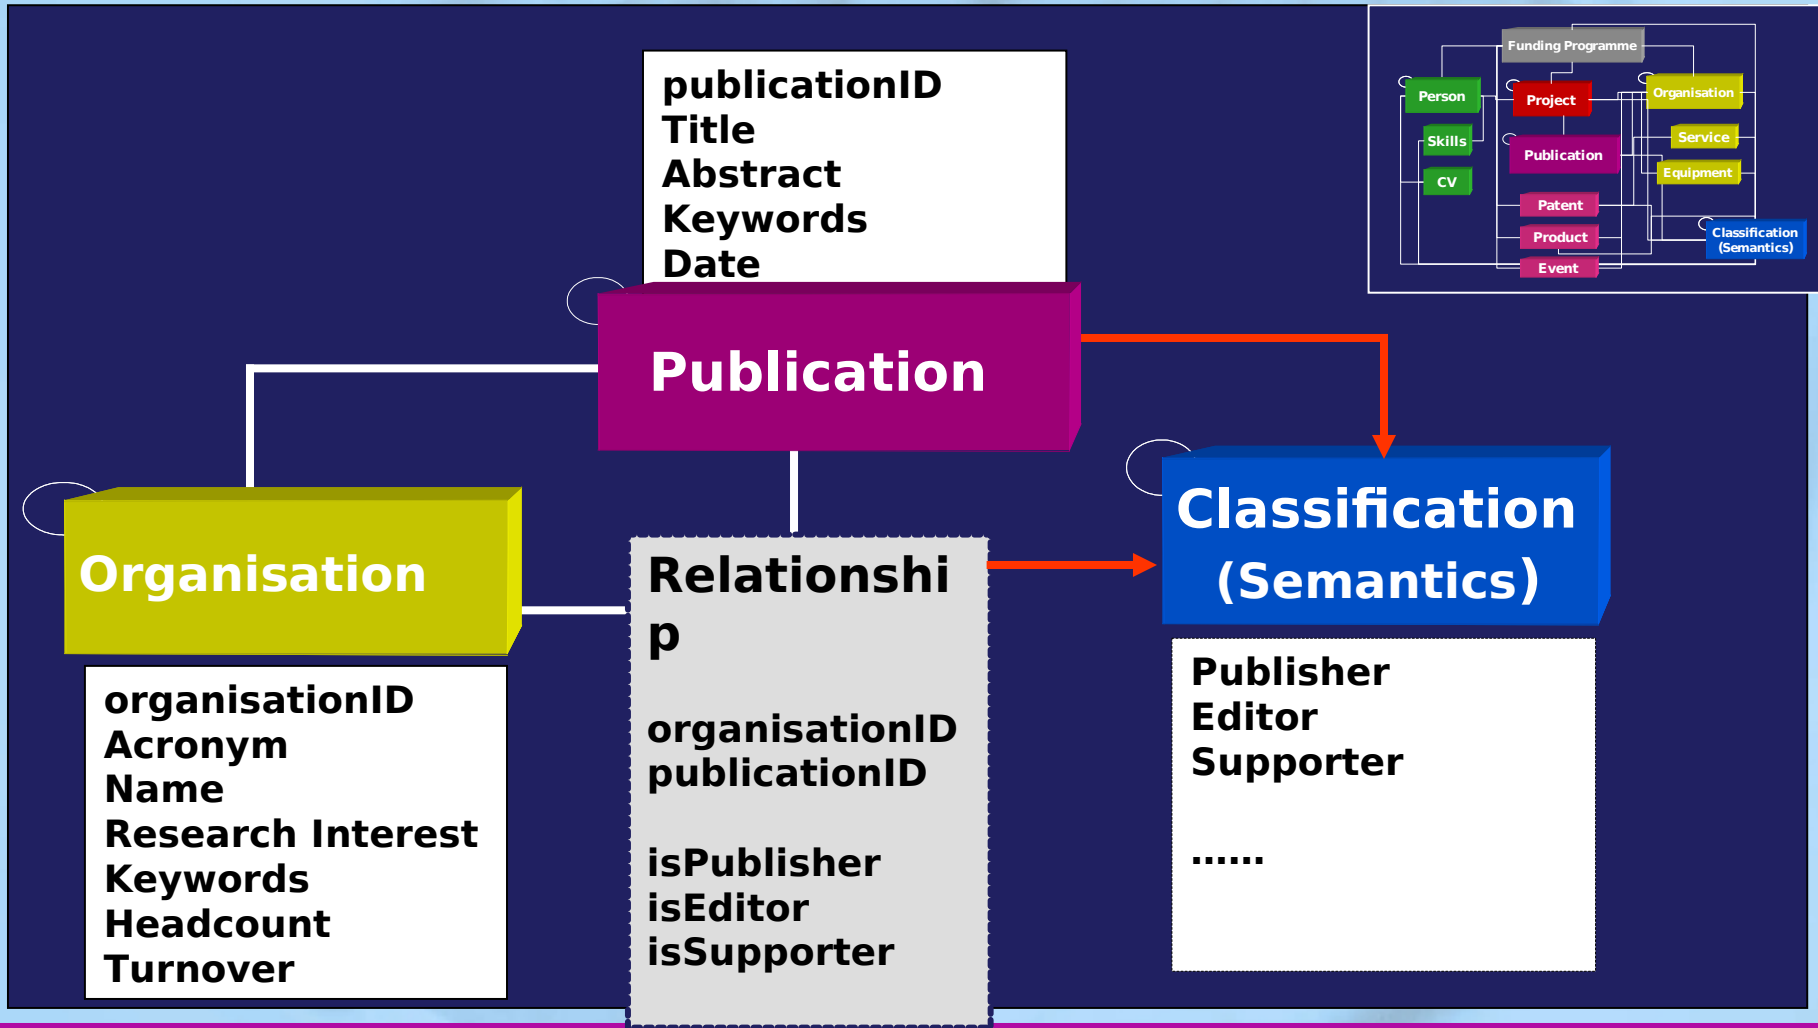

- a model representing the entities involved in research processes and their interrelationships by metadata
- to aim at current (in time, in context) information
- to support the building of quality research information systems
- to allow for quality data interchange between research information systems

Current European Research Information Format
