

A vertical strip on the left side of the slide contains several sketches by Leonardo da Vinci. These include detailed drawings of mechanical devices, such as a crane with a pulley system, a screw-driven mechanism, and various other contraptions. There are also some smaller sketches of tools and components.

Managing OA Multimedia Multitype Digital Documents in the OpenDLib Digital Library Management System

Multimedia Networked Information
Systems Laboratory

ISTI "A. Faedo" - CNR

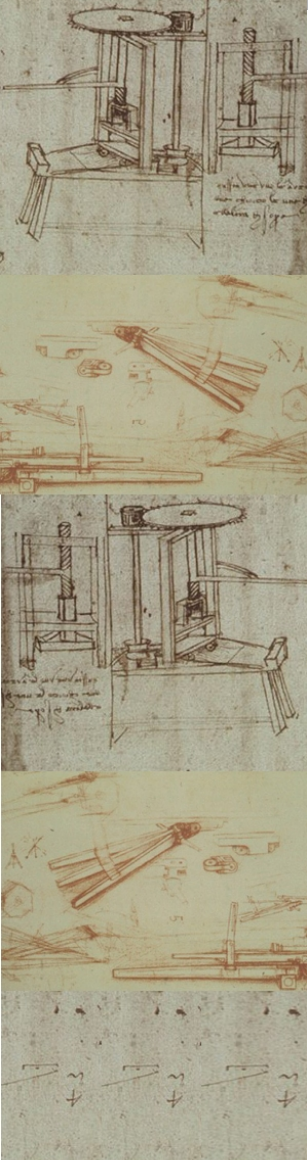

Pisa - Italy

What is a digital library?

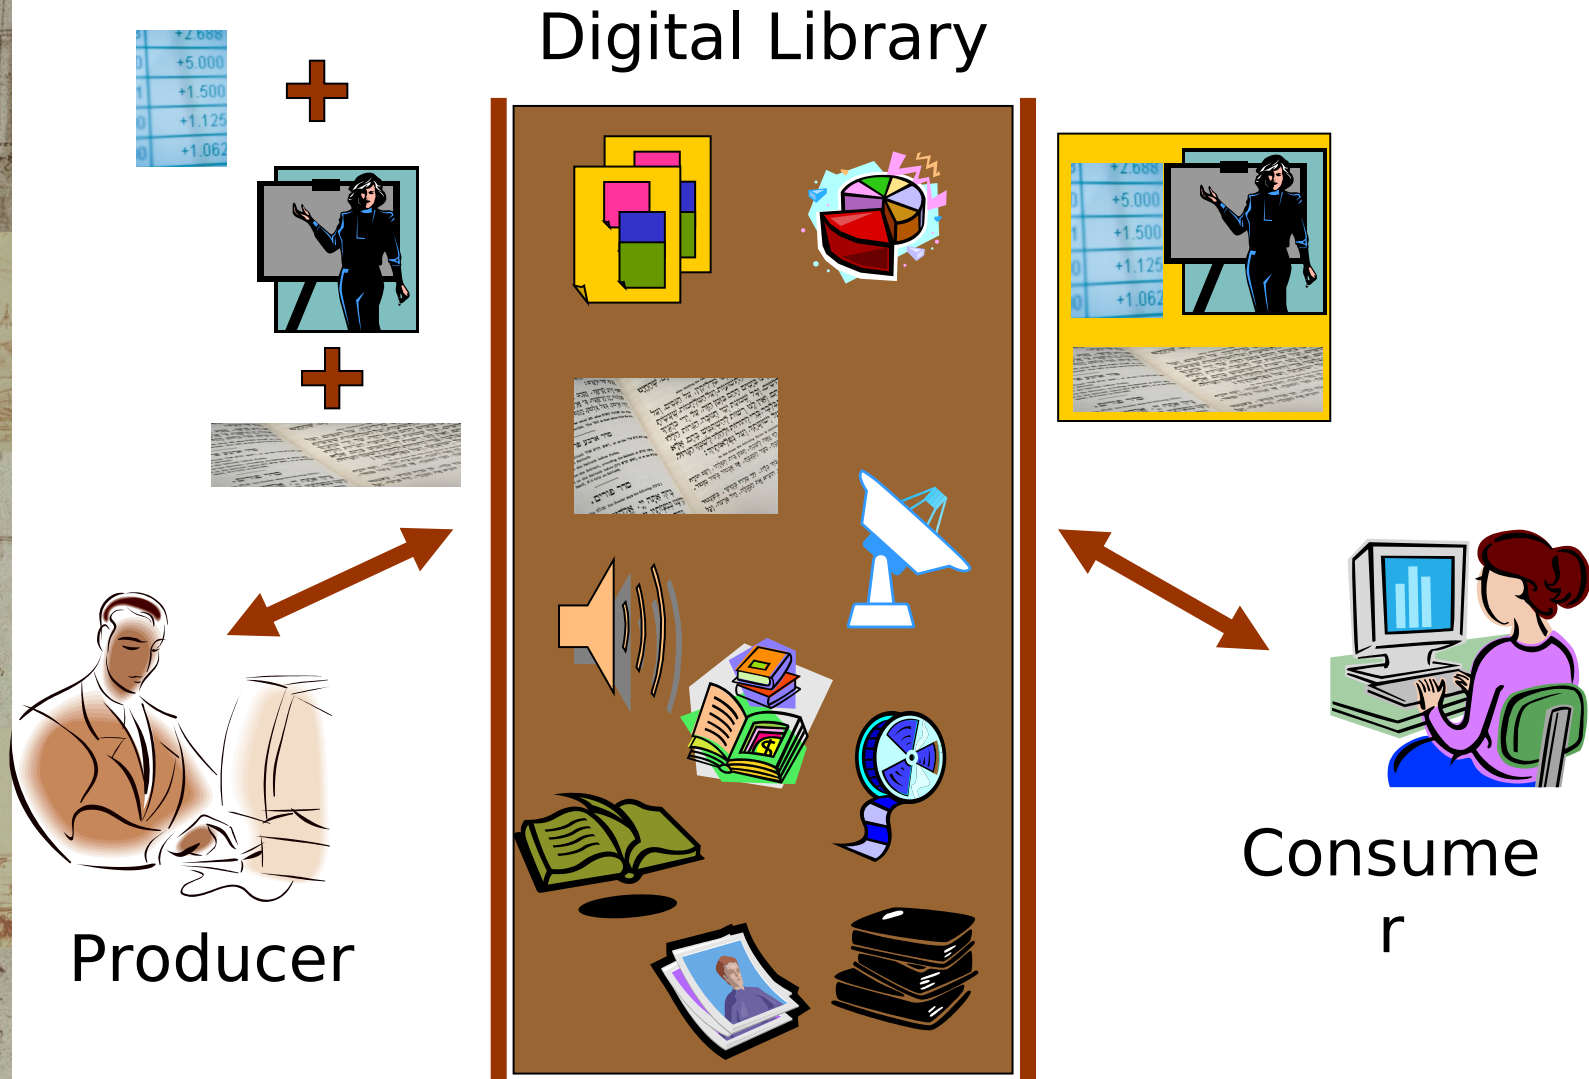

“A digital library is an institution that performs and/or supports (at least) the functions of a library in the context of a distributed, networked collection of information objects in digital form”

Nicholas Belkin
Eight DELOS Workshop
Stockholm, 1998

The functions of a library powered by OpenDLib

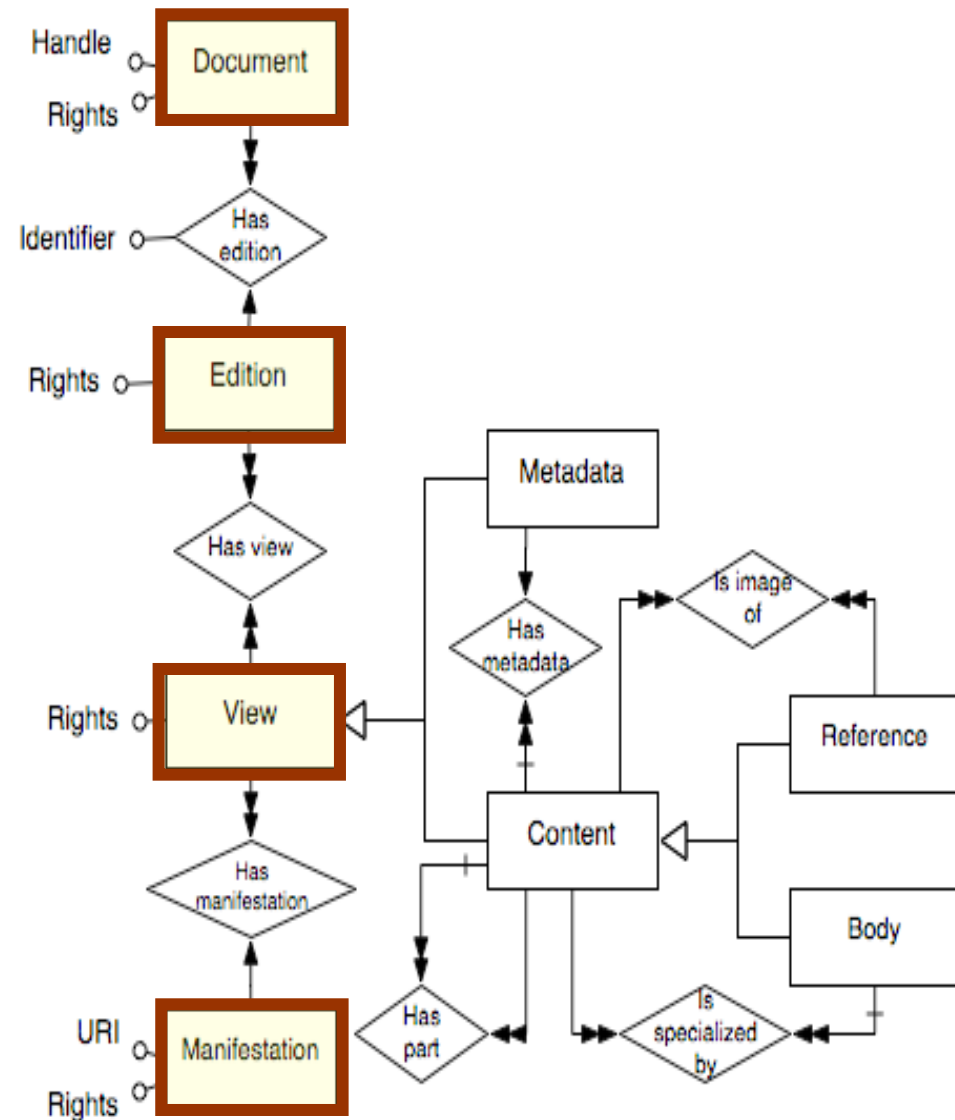

- 
- ❖ Selecting, collecting, preserving, organizing, representing, providing controlled access to, ensuring knowledge of, and disseminating information objects
 - ❖ Mediating and supporting interaction between information users and information objects

OpenDLib as a communication means

DoMDL as logical document model

DoMDL represents structured, multi-editions and multimedia documents that can be composed and disseminated in multiple manifestation formats

DoMDL in one shot

❖ Document

Dante Alighieri "La divina commedia"

❖ Edition

Ridotta a miglior lezione dagli accademici della
Crusca 1595

❖ View

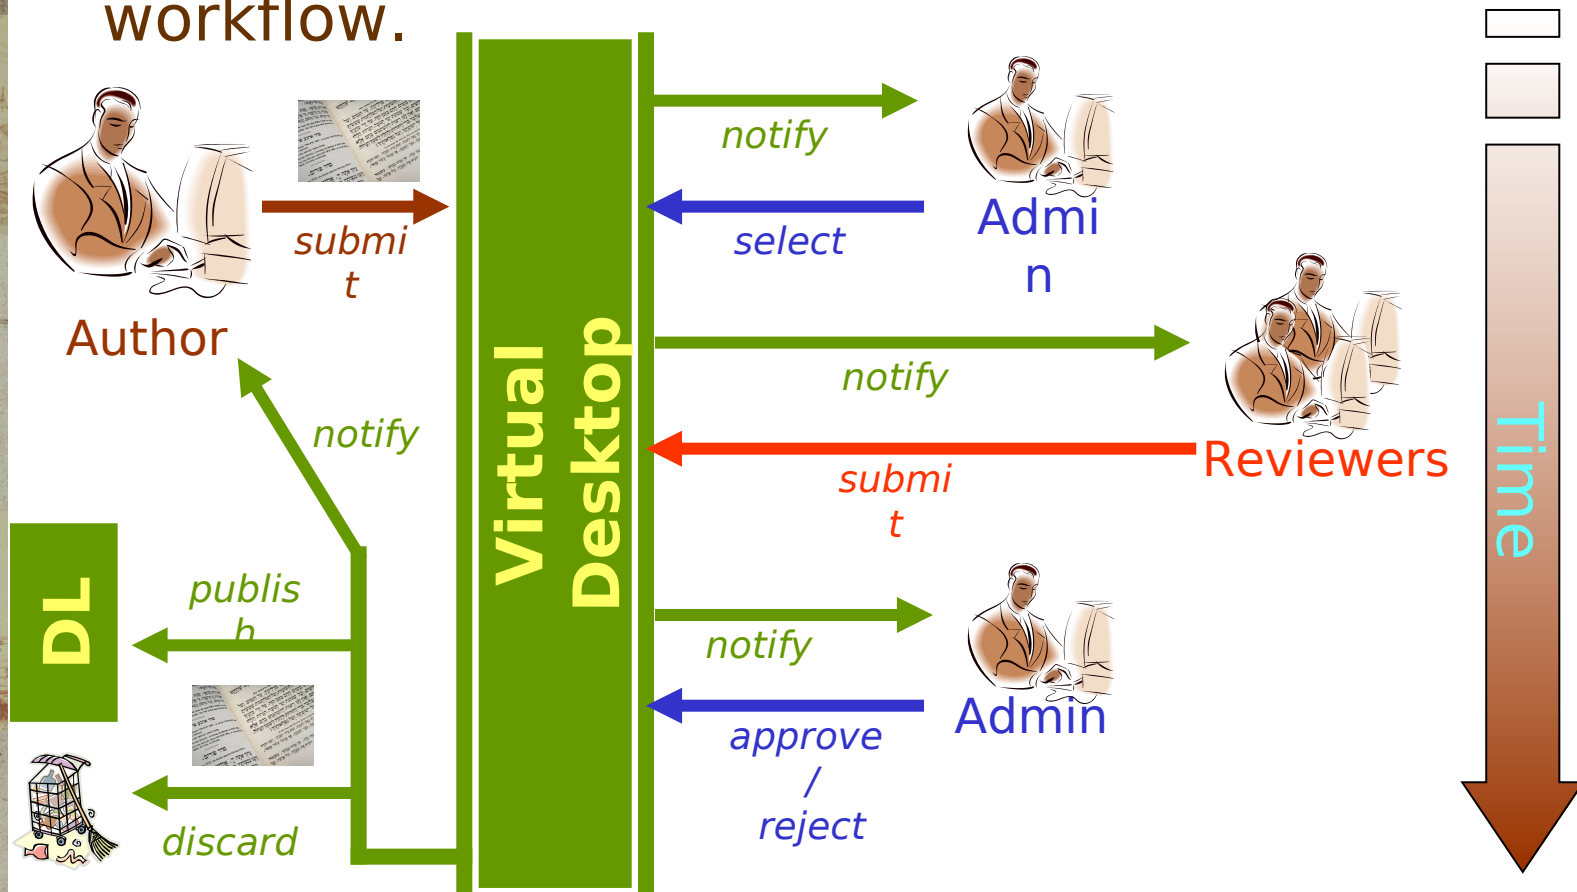

Images

❖ Manifestation

OpenDLib services for self-publishing

Allow authors, reviewers, and administrators to access a virtual desktop where all the communications are aided by a customized workflow.

Submit Service

Allows authors to easily deposit documents and provide them with descriptive, structural and administrative metadata.

- ❖ Create, update and submit new documents
- ❖ Create, update and submit new editions of already published documents
- ❖ Make revision of documents already published
- ❖ Withdraw documents from the repository

Review Service

Allows to access documents and easily produce on line reviews.

- ❖ Access the document on-line
- ❖ Create, update, and submit evaluation
- ❖ Access to parts of the evaluation expressed by other reviewers
- ❖ Access to relevant cited bibliography

Administration Service

Allows the DL Administrator to have a general view of the status of all the documents submitted for publications by different authorities, and to manage them accordingly.

- ❖ Access the document on-line
- ❖ Edit the metadata
- ❖ Assign to a reviewer
- ❖ Compose a number of documents to publish a proceedings or a journal
- ❖ Approve/Reject

Final Remarks

The OpenDLib system exploits the DoMDL model by decoupling the storage layer from the application layer.

- ❖ A document is really composed by several files
- ❖ Multiple metadata formats can be associated with the same document
- ❖ A manifestation can be stored inside or outside the DL system
- ❖ A set of rules to download, deliver, transcode or display define the rights on the document views
- ❖ The author can benefit from an integrated desktop to self-publish his document
- ❖ The end-user can transparently access complex documents that are automatically assembled by the system
